

# 10 ways to manage respiratory symptoms at home

If you have a cough, shortness of breath or difficulty breathing, fever of 100.4° F or higher, chills, muscle pain, sore throat and/or a new loss of taste or smell, call your healthcare provider. They may tell you to manage your care from home. Follow these tips:

1. **Stay home** from work, school, and away from other public places. If you must go out, avoid using any kind of public transportation, ridesharing, or taxis.

6. **Cover your cough and sneezes.**

2. **Monitor your symptoms** carefully. If your symptoms get worse, call your healthcare provider immediately.

7. **Wash your hands often** with soap and water for at least 20 seconds or clean your hands with an alcohol-based hand sanitizer that contains at least 60% alcohol.

3. **Get rest and stay hydrated.**

8. As much as possible, **stay** in a specific room and **away from other people** in your home. Also, you should use a separate bathroom, if available. If you need to be around other people in or outside of the home, wear a facemask.

4. If you have a medical appointment, **call the healthcare provider** ahead of time and tell them that you have or may have COVID-19.

9. **Avoid sharing personal items** with other people in your household, like dishes, towels, and bedding.

5. For medical emergencies, call 911 and **notify the dispatch personnel** that you have or may have COVID-19.

10. **Clean all surfaces** that are touched often, like counters, tabletops, and doorknobs. Use household cleaning sprays or wipes according to the label instructions.
